

ABSTRACT

A commercially available product, of a type having a batting with a softness and flexibility and configured for use in the formation of a quilt, where the quilt has at least one cover to be securably attached to the batting,

5 includes a composite member sold in at least one desirable size for making a quilt and formed of the batting and an adhesive material as an article of manufacture, is disclosed. The batting consists of a fibrous material and the adhesive material includes a water-soluble material and is effective to form a removable bond at the opposing faces of the batting, so that the quilt may be

10 formed by at least temporary attachment of the cover to the batting by the bond and the bond is removable after formation of the quilt.
